Capture One 11 Release Notes

Capture One 11 is a professional RAW converter offering you ultimate image quality with beautiful colors and incredible detail for more than 400 high-end cameras – straight out of the box. It offers state-of-the-art tethered capture, powerful digital asset management, extensive adjustment tools and a flexible workflow.

With an updated processing engine, market-leading performance and powerful new features, Capture One 11 is the professional choice in imaging software. The highly responsive tools give you the power to create stunning images from your camera's RAW files, in a time-saving workflow that can be customized to fit your needs.

Capture One 11 is made by Phase One (the world's leading manufacturer of high-end digital camera systems) in collaboration with the world's leading professional photographers.

All run modes are included in the one installer and the run mode is determined by the license key used. The trial is also included in the installer and is registered as the full product upon activation. Capture One 11 is available in four modes (these are notated in the camera grid):

- Capture One Pro
- Capture One DB (digital back only)
- Capture One Pro Sony
- Capture One Express Sony

The release notes include notes for all releases of Capture One 11. Previous release notes can be found in the Phase One download archive.

Best regards,
Team Phase One

11 Feature Summary

Capture One 11 is a major release containing new features, performance improvements, bug fixes and new camera and lens support.

New Feature Summary

- Annotations
- Export with Assets
- Improved “Back-up And Restore” mechanism for Catalogs
- Duplicate checker for the Importer
- LAB Readouts
- Levels as a Layer Adjustment
- Color Balance as a Layer Adjustment
- Create new Filled Layer
- Presets for Layer capable tools
- Master Layer Opacity
- Feather Mask
- Refine Mask Edge
- Clear Mask
- Greyscale Mask preview mode
- Expanded AppleScript

Performance

- Catalog load speed improved
- More responsive sliders for Mac
- Faster masking

Miscellaneous Improvements

- Redesigned Local adjustments concept (now Layers)
- New Custom tool tab icons
- Color editor logic for blending multiple Layer adjustments
- Layer creation options
- Toolbar Auto tool aligned with Tool Auto
- Added Brightness and Contrast parameter to Auto

11 Feature Walk Through

Annotations

This feature enables mark-up and annotation on an image for communication between photographer and retoucher when collaborating on projects. The annotations are stored as part of the settings files and so can be packed easily with EIP. A small pencil icon is used to indicate Annotated images in the Browser. The feature includes:

- Drawing (in several colors)
- Erase
- Tool bar Show/hide button
- Filters (by annotated state)
- Include/exclude options when processing/exporting
- Annotations in a separate Layer (see Export with Assets below)

Export/Process with Assets

Capture One 11 adds the ability to include elements of the Capture One workflow in the final file. The options to include can be configured in the recipe tab>Meta data. When used as a PSD Export, the asset will be included in its own layer.

- Annotations

An output option is added for including the annotations in the final file. When using PSD output these are processed to a layer, providing the notes in a non-destructive overlay.

- Crop as Path (PSD only)

Available when outputting to PSD, this option (like ignore crop) processes the entire canvas but stores the crop from Capture One in the output file as a path. By storing the crop in a PSD path, the retoucher can reload the Art Directors' original crop from the image at any time after retouching is concluded.

- Include Overlay

The overlay used in composition tasks can be included in the file. When working with PSD output, the overlay will be processed to its own layer.

- Watermark as Layer

Watermarks can also be exported to their own layer when working with PSD output.

Improved Back-up and Restore Mechanism for Catalogs

Should the catalog need restoring from a back up, following crash or corruption the application can now assist the user in restoring the back up file from the back-ups folder automatically.

Duplicate Checker for the Importer

Designed to solve the problems of importing from reusing a partially full memory card, the importer can check the source against the document for files already imported. Using a super robust caching mechanism against the RAW data means importing the difference from the last import is easy, accurate and efficient.

Lab Readouts

Due to popular request, the Lab readouts function has been added to the application, giving Lab values at the cursor point in the image. Enable Lab readouts from the View menu.

Levels as a Layer Adjustment

Levels can now be used in conjunction with layers/masks

Color Balance as a Layer Adjustment

Color balance can now be used in conjunction with layers/masks

Create New Filled Layer

Click and hold the Create new "+" icon in the Layers tool to reveal the new option - Create new filled mask can be found here. This is useful for creating a quick filled layer for adding an overall master-grade to an image

Presets for Layer Capable Tools

The preset function (saving a tool setting for later use) is now available when working with Layers. Select the Layer, mask the area to be adjusted and then apply the preset from the

specific tool preset menu. Note only one preset per tool can be used in a single Layer (no stacking of presets). To use multiple presets, use multiple Layers. The result will be additive.

This is particularly useful when used in combination with “Auto Adjust” tool, thereby opening a workflow of “normalization” in the Background Layer and applying a visual “offset” or “master-grade” effect on top of basic adjustments.

Styles can also be applied to the Layer* by right clicking on the layer>Apply settings from... Where the Style contains adjustments supported by Layers, the settings will be applied to those tools and thus into the mask.

**Some Styles settings are not supported or may be partially applied depending on if the Style contains an adjustment supported by a mask. As an example, if a Style contains Rotation and Exposure, Rotation will be ignored and only Exposure from the Style will be applied.*

Master Layer Opacity

Once adjustments (or a Style as described above) are applied in a mask, the “impact” of the layer adjustment can be modified with the Opacity slider. Each layer has a percentage indicator giving an overview of blending when using multiple Layers.

Feather Mask

Once a Mask is drawn, the edges can be softened by Feathering the Mask. Click the “...” menu in the Layers tool > Feather Mask to open the modal dialog. Adjust and press OK to commit.

Refine Mask Edge

Used in combination with Auto Mask. Auto Mask the target area as normal, aiming to get a tight a mask as possible. Run “Refine Mask” from the “...” menu in the Layers tool to refine the selection. This is best used in combination with the Greyscale Mask preview (especially with fine selections like hair).

Greyscale Mask Preview

Converts the preview to a Black and White image to aid masking and fine selections. Black is unmasked, White is masked and everything in between is a shade of Grey (depending on opacity). Like the existing Mask it can be toggled on/off using a short cut (Opt+M mac/Alt+M Win) or chosen from the Brush cursor sub menu (click-hold the Brush cursor icon

in the cursor palette or Layers tool.) Note, if you enable this tool without a Layer mask present the entire image will be a black. A small warning triangle on the tool bar will indicate Greyscale masking is enabled for the variant.

Expanded AppleScript (Mac)

Automation scripting is extended, with the following properties now scriptable:

- Adjustments (Limited to those also available in SDK)
- Layers and Layer functions
- Adding and moving variants between collections
- Exposure Evaluation Tool
- Clones and variants (pick/promote/demote)
- Styles/Presets
- Export Originals
- LCC create/apply/remove
- Filters

Refactors

The following changes are made to Token syntax in Capture One 11. Existing scripts will need updating with the new syntax in order to function in Capture One 11.

- The syntax for tokens automation is consolidated across all tools using a new single delimiter type.
- “/” for naming and “|” for path delimiters are no longer accepted.
- All Tokens are now enclosed inside [square brackets] for all fields that accept tokens.
- The field type will automatically handle if the result is a name or path.

Other changes

- Minor changes to properties naming

Performance

- Catalog load speed improved
- More responsive sliders for Mac
- Faster masking

Miscellaneous Improvements

- In moving to a more layer centric theme, the Local Adjustments design and nomenclature is updated to a “Layers” terminology.
- The concept of the small brush icon next to the tool (meaning the tool was working on selected layer) is removed, and now only indicates that the tool CAN be used on a mask if the Layer (i.e. other than Background) is selected.
- A new default workspace is presented without the Local Adjustments tab - but the layers tool appears in each tool tab.
- The Custom Tool Tab iconography is updated to be more usable.
- The color editor can now “stack” overlapped layers containing color edits resulting in an additive process. This requires the variant use the 11 Engine, as set in the Base Characteristics.
- Layer creation workflow changed. The auto-select behavior of the layer after creation is removed to prevent accidental naming of the layer. Instead the layer is highlighted after creation - to rename a layer press Return key to make the label active, enter the name, then Return again to commit.
- Auto - The Exposure tool “Auto” only affects the Exposure slider. Now the Tool bar Auto (the big “A”) has the option to split Exposure from Brightness and contrast so that the Tool can function in the same way.

System Requirements

We recommend that your computer has at least the minimum specifications outlined below to run Capture One 11.

Microsoft® Windows® minimum requirements

- Intel or AMD CPU with 2 cores
- 8 GB of RAM
- 10 GB of free hard disk space
- Color calibrated monitor with 1280x800, 24-bit resolution at 96dpi screen ruling
- Windows 7® SP1 64-bit, Windows 8.1® 64-bit, Windows 10® 64-bit*
- Microsoft® .NET Framework version 4.7 (will be installed if not present)

**Support for Capture One 11 on Windows 10 is supported for builds supporting .NET 4.7 - This is currently from Windows 10 Anniversary Update (build 1607) through to Fall Creators Edition (build 1709)*

Apple® Macintosh® minimum requirements

- Intel CPU with 2 cores
- 8 GB of RAM
- 10 GB of free hard disk space
- Calibrated color monitor with 1280x800, 24-bit resolution at 96dpi
- OS X 10.11.6, macOS 10.12.6, macOS 10.13*

**Support for macOS 10.13 is supported for builds up to 10.13.1*

Recommended system requirements

If working with high-resolution images and doing calculation-heavy adjustments we recommend the following:

- Intel CPU with 4+ cores
- 16+ GB of RAM
- Solid State Disk (SSD)
- A fast Graphics card from NVIDIA or AMD with 2GB+ RAM (4+ GB for 4k or multiple monitors)

Installation

Capture One 11 is compatible with previous 10.x, 9.x, 8.x, 7.x and 6.x versions. For existing users it is recommended to migrate images from 5.x and 4.x to at least version 8.x first, before opening in 11.x

It is generally recommended that you only install one version of Capture One.

Install on Windows

Capture One includes an easy-to-use installer that will install all the software you need to run the application on a Windows based computer.

To install the software, please follow the procedure below:

- Download the application from the Phase One website: <http://www.phaseone.com/downloads.aspx>
- Run the executable software install file (.exe)
- Read and accept the license agreement when presented.
- Follow the on-screen instructions to complete the installation.
- Read and accept the license agreement when presented.

In addition, Leaf and Mamiya DM Back users should install specific Leaf drivers before connecting their back by selecting Install Leaf Drivers from the Capture One menu in the application. We recommend that you quit Capture One and restart the computer after the installation.

Install on OS X

Capture One includes an easy-to-use installer that will install all the software necessary to run the application on OS X.

To install the software, please follow the procedure below:

- Download the application from the Phase One website: <http://www.phaseone.com/downloads.aspx>
- Open the Capture One disk image (.dmg)
- Drag the Capture One icon to the Applications folder.
- Start the Capture One application from your Applications folder.
- Read and accept the license agreement when presented.

Recommendations and limitations

All users

- When you have disconnected a camera do not reconnect a camera until the Camera tool status changes to "No Camera Attached".
- DNG support not optimized for some cameras.

Other camera users

- The following functionality is not supported for Fujifilm X-trans RAW files: processing/exporting to DNG.
- Some cameras provide mutlishop functionality by way of (e.g.) multiple exposure or pixel shifting. In most cases the functionality will not be available in Capture One, however a single RAW file from the "stack" may be viewable and editable in Capture One (as if it was a shot in single Capture mode).

Digital Back users

- Battery charging on IQ systems can cause issues with stability over Thunderbolt adapters or in low power devices such as laptops. Switch charging off in the digital back menu if you suffer repeated disconnections.
- For tethered shooting with Phase One or Credo digital backs make sure that your system can either supply at least 10W power via FireWire (more than most laptops can supply) or make sure to activate the "Force Battery" setting on the back. Use the 4.5m Phase One FireWire cable.
- For tethered shooting with Leaf Aptus and Mamiya DM digital backs make sure that your system can supply at least 12W of power via FireWire (more than most laptops can supply). Use a Leaf or Mamiya FireWire cable and repeater.
- Unless otherwise specified for your Phase One camera system, do not open the shutter on the camera prior to opening the Live View window. Doing so will generate errors on the digital back after closing the Live View window. The recommended procedure for using Live View is to first open the Live View window, then open the shutter on the camera, use Live View as desired, when done, close the shutter on the camera, and close the Live View window.
- For Leaf Backs and Mamiya DM systems, the camera body must be selected in application preferences before connecting the back.
- For Leaf Backs and Mamiya DM systems, in the case of a communication error during firmware upload, please wait 10 minutes before disconnecting the FireWire cable.

- Leaf Aptus II 8 only works with black and white Live View.
- Focus controls for iXR and iXA cameras are only supported by IQ and Credo backs.
- Orientation override does not work in live view for Leaf Aptus/AFi backs. Users wishing to lock orientation during live view should use the camera orientation setting.

Known issues

Below you will find a list of known issues for Capture One 11 at the time of shipping:

All users

- Browsing folders containing unsupported image files may affect application performance.
- Previews from earlier versions of Capture One may be updated. In some cases, this can affect the application performance the first time images are viewed in this version of Capture One.
- If using a non US laptop keyboard it might be preferable to change some of the standard keyboard shortcuts.
- Editing images in external applications other than Adobe Photoshop might result in unexpected behavior.
- Operation under virtualization software (e.g. Parallels, Hackintosh etc) may cause instability. We do not recommend you use these OS configurations.

Mac users

- It is only possible to show the Capture One toolbar in “Icon Only” mode.
- Live View over USB can stall without the use of a repeater.

Windows users

- Windows drivers are required for some older models of Canon DSLR cameras to be able to shoot tethered. These drivers are available from Canon’s web site.
- If you have Bonjour 2.0.3 installed you may experience problems with Capture Pilot. Bonjour 2.0.2 (shipping with Capture One 9) and 2.0.4 (shipped with iTunes) have been tested to work with Capture Pilot. To check the version number of Bonjour, go to ‘Control Panel’ and select ‘Programs and Features’.
- Importing a catalog can result in the last picture not getting imported.
- Operation under RAMDisk by Dataram is known to cause issues with disk labeling. Capture One is not supported with this configuration.
- Plays.TV/Raptr installed along with some AMD devices can cause instability

File support: Notes and limitations

The appendices below contain the data sheets for supported cameras in Capture One.

The information here is subject to change. Some errors may be omitted. For issues and clarification on any camera listed here, contact Phase One Support via support.phaseone.com

Capture One DNG colors

Capture One has the ability to treat and display camera files that were converted to DNG, as if it was the original RAW. The file in question has to come from a camera we officially support with native RAW support and the RAW data also needs to have been embedded in the DNG at the point of conversion. Note we do not support Adobe Lens or Color Profiles in this workflow.

Other file support

Layered Tiff: Capture One 9.1 onward can support Tiff files with alpha channel or layers saved in the file (from other apps like Adobe Photoshop) but for viewing purposes only. Reprocessing the image will ignore the alpha channel or layers (flattened image).

PSD: Capture 10.1 onward can support PSD files in the viewer. The PSD can contain any adjustments, layers, text or smart objects but must be saved in Photoshop with “maximise compatibility” enabled. Reprocessing the image from Capture One will ignore layers in the resulting file (flattened image).

File size limitations:

Smallest supported file for viewing: minimum side of 16px

Smallest supported file for editing: minimum side of 512px.

Largest supported file: Width x Height must be smaller than 40000 x 20000 pixels or sum thereof.

RAW support:

RAW files support is limited to the full camera RAW format unless specified in the table below. Special or auxiliary modes only supported where noted: Pro = (Pro), DB (digital back only) = (DB), Pro Sony = (ProS), Express Sony = (ES)

Model	Tethered Support	Live view	File Support	Required run modes	Notes
